

# DUST-ARREST™ HCC

## Long Term Haulroad Dust Control Agent

### FEATURES/BENEFITS

#### Features

- Up to six months control
- Easily mixes with water
- Does not wash away in rain
- Improves roadbed
- Safe to use

#### Benefits

- Infrequent application
- Decreased water truck costs
- Easy to mix and apply
- Does not harm vegetation

*Dust-Arrest HCC* is available in 55 gallon drums, totes and bulk deliveries.

### Description

*Dust-Arrest HCC* is the solution to fugitive and blowing dust which can be a health problem and increase maintenance costs significantly.

*Dust-Arrest HCC* is not a hygroscopic salt that works by attracting moisture, but rather a formulated emulsion that attracts dust particles and agglomerates them into a dust-free roadbed.

*Dust-Arrest HCC* should be used on haulroads, unpaved parking lots, alongside of paved roads, construction sites, dirt tracks and unpaved storage yards.

When applied properly, dust control can last for months, depending upon traffic levels.

### Typical Use Directions (also see product label)

Prepare roadbed by grading and loosening surface as much as possible. Dilute concentrate with water in a ratio of 7:1 (Water:Dust-Arrest HCC). Apply by high pressure spray to penetrate the soil, one-half gallon per square yard. Apply a second coating. Road is ready for traffic in five to ten minutes, or when roadbed appears dry and tack free.

**IMPORTANT:** Before using *DUST-ARREST HCC*, always be sure to read and follow precautions and directions for use appearing on the product container label and MSDS. (Sep06)
